ARTELINEA

FIRENZE 1962

Artelinea Spa manufactures its products with the utmost care and checks its products to ensure their integrity and quality. Artelinea basin tops in opalite or enameled glass are suitable for using in the bathroom and tested in compliance with mandatory requirements, guaranteed in accordance with the law.

This product has passed the **TEMPERATURE RESISTANCE** test as specified in the Par.5.4 of the UNI EN14688: 2015 standard.

This product has been manufactured with innovative procedures.

The control tests have been carried out in highly specialized centers that have confirmed the basin top is suitable to be used.

Final inspection carried out by: _____

Order number: _____

Serial number: _____

TECHNICAL DATA SHEET

IMPORTANT INSTRUCTIONS FOR CORRECT INSTALLATION

Dear installer, we would like to point out that the present product consists of a **non-tempered material** and it is fragile. It is necessary that, when installing the siphon, the taps, the waste valve, etc., no tension is transmitted to the glass due to over-tightened items. All the items should be **tighten only by hand** and **without any use of tools**.

On colored surfaces (such as the rear side of colored tops or basin tops) and in their immediate nearby, **just use NEUTRAL silicone** because acidic silicone can lead to irreparable damage.

Thermofused basin **tops must not be fixed to the below structure with silicone**, as this can cause a strong tension and break the basin top. We recommend to prepare the support structure with non-slip "moss rubber" or similar (Artelinea's vanities are supplied already equipped with a moss rubber). The horizontal joint between the back wall and the basin top or top, on the other hand, can be easily seal with silicone.

To avoid any thermal shock, the **max. TEMPERATURE CHANGE** on Artelinea basin tops must never exceed **55°C**.

Please **do not discard this data sheet**, but forward it to the end user together with other documents and instructions that may have been received.

OPERATING AND MAINTENANCE INSTRUCTIONS

Dear Customer, please note the following when using and maintaining the product:

- 1.) Aggressive cleaning agents can attack and destroy both the possible color coating and the chromed plating of the waste hole.
- 2.) Do not use solvents or abrasives, which can scratch the surface of the top or basin top.
- 3.) Never sit or stand on the top or basin top.
- 4.) Do not drop objects on the product or place hot objects on the product.
- 5.) In order to avoid any thermal shock, a quick change from cold to warm water (and vice versa) must be avoided. We also urge you to do not throw any hot water (example: water from the water heater) directly into the basin.

The above specifications are effective throughout the product lifecycle and comply with the "Consumer Information Standards" of 10th April 1991 No.126 and the "Implementing Regulation" of 8th February 1997 No.101.
